

Amendments to the Claims:

Please amend claims 2, 3 and 19 as shown in the following listing of claims.
This listing of claims will replace all prior versions, and listings, of claims in the
5 application.

1 1. (canceled).

1 2. (currently amended) A terminal as claimed in claim 19, wherein the
2 antenna feed is coupled to the ground conductor via ~~[[a]]~~ the capacitor.

1 3. (currently amended) A terminal as claimed in claim 2, wherein the
2 capacitor is a parallel plate capacitor formed by the ~~completely flat~~ conducting
3 plate and a portion of the ground conductor.

1 4. (previously presented) A terminal as claimed in claim 19, wherein the
2 antenna feed is coupled to the ground conductor by capacitance between an
3 inductive element and the ground conductor.

1 5. (previously presented) A terminal as claimed in claim 19, wherein a slot is
2 provided in the ground conductor.

1 6. (previously presented) A terminal as claimed in claim 5, wherein the slot is
2 parallel to the major axis of the terminal.

1 7. (previously presented) A terminal as claimed in claim 19, wherein the
2 ground conductor is a handset case.

1 8. (previously presented) A terminal as claimed in claim 19, wherein the
2 ground conductor is a printed circuit board ground plane.

1 9. (previously presented) A terminal as claimed in claim 19, wherein a
2 matching network is provided between the transceiver and the antenna feed.

1 10. (canceled).

1 11. (canceled).

1 12. (canceled).

1 13. (canceled).

1 14. (canceled).

1 15. (canceled).

1 16. (canceled).

1 17. (canceled).

1 18. (canceled).

1 19. (currently amended) A wireless terminal comprising a ground conductor
2 and a transceiver coupled to an antenna feed, wherein the antenna feed is
3 capacitively coupled to the ground conductor by means of a ~~completely flat~~
4 conducting plate separate from and opposed to a portion of the ground conductor
5 to form a capacitor, the non-radiating conducting plate being configured so that
6 the capacitor has a capacitance to maximize coupling and minimize reactance
7 such that all of radiation from the wireless terminal comes from the ground
8 conductor, the conducting plate being exclusively connected to a support that is at
9 least partially located between the conducting plate and the ground conductor ~~that~~
10 ~~form a capacitor~~, the conducting plate of the capacitor being fed via the support,
11 the support being electrically insulated from the ground conductor that functions
12 as a radiator.

1 20. (previously presented) A terminal as claimed in claim 19, wherein the
2 conducting plate is positioned relative to the ground conductor such that a major

3 surface of the ground conductor is perpendicular to a major surface of the
4 conducting plate.

1 21. (previously presented) A terminal as claimed in claim 20, wherein the
2 ground conductor includes a slot that extends along the length of the ground
3 conductor and is perpendicular to the major surface of the conducting plate.
